

Technology Thoughts – Implants and Frequency Healing

Executive Summary

Today, we look around and think we see Technology everywhere; however, it is so ubiquitous it is in the unseen too. We fail to realize how inherent technology has become in everyday items. In essence, most people today would not be able to function without technology. The “technology” that I am specifically referring to at this moment is best summarized as “electronics” based technology, computers, silicon chips, wireless services, etc., and even Artificial Intelligence. Whether we realize it or not, we are living “in partnership” with Technology, especially Artificial Intelligence (AI); and the Technology Companies mishandling of AI since the 1960’s has created many of our headaches and nightmares of today, from Data Security Issues to Bank Processing Transactions, and beyond...

I am going to cover three topics in this short Paper, Executive Summary style. 1. Implanted Technology and the risks associated with allowing anyone remote access to implanted technology due to data security issues. 2. Frequency Healing and how technology, Implanted and Non-Implanted, can be utilized to Heal as well as Attack a person, animals, etc. by “interfering with cell growth” and the bodies natural electrical data transmission between cells, impulses, etc. 3. Artificial Intelligence and how we must view AI through very clear glasses and not rose-colored glasses, as the Risks of utilizing AI to Attack through Implanted Technology and Frequency Attacks far outweigh the Benefits, and if we must be extremely careful with how AI is managed and the Fail Safe’s for AI going rouge and trying to take over the World.

Implanted Technology

We hear all kinds of stories about how “implanted technology” can address many health issues today; and it is true, technology can help us in many ways. However, there is a dark side to implanted technology, as the Military learned back in the 1980’s; and many are learning today. The idea and concept tested back in the 1980’s on Soldiers under the SDI, Star Wars Program, was to see if implanted technology could be utilized to communicate remotely, wirelessly, with Soldiers in the Field, in a War Zone, without the need to build communications centers. The ability to communicate was easily expanded to the ability to monitor Soldier Health in real time, etc.

The most efficient method of handling communications was through Satellites. Yes, the Military was already operating Satellite phones on 5G Frequencies way back in the 1980’s; and I am sure is utilizing even more high-tech communications today. For those too young, most of today’s technology “guru’s”, to remember the Cold War and the SDI, Star Wars Program, when most of today’s modern technology was developed, it was a “very aggressive” time in technology development. The “fear” of falling behind the USSR, now Russia and other old Soviet Bloc Countries, when Germany was still split in “two” post-WWII into East and West Germany, was very high. The risk taking on and off the books was standard operating procedure. Sadly, this is part of our past that we have not openly discussed; and many do not want to discuss, due to actions that were unethical and reprehensible back in those days. However, we must discuss them; and it is “extremely important” that in discussing these actions of the past that they be viewed “in the time they occurred”; and noting that the past cannot be changed.

Therefore, in the Present, and moving toward the Future, we must find ways to address the sins of the Past, and not dwell on them, simply because “we can not change the Past”; and therefore, we must find ways to “heal” from the past, make sure we don’t repeat those activities, and focus on the Future. The Future is all we have left; so, let’s not destroy it by dwelling on the Past, that cannot be changed...

As we know today, many companies are designing Implants for a variety of reasons; and there have been many cases of people having technology implanted in them voluntarily. I think it is insane; but that is because I have experienced the dark side of technology implants. Before you start thinking I'm unveiling something new and exotic, just go online, look around your house, or look around a store. We have put tracking chips in pets, we have people that implanted devices to start their vehicles, we have people that have implanted cell phone parts in them, and we have all kinds of tracking devices, air tags, and the like, that we utilize to track our things and even our kids, which could easily be implanted too.

While there is great a benefit to implanted technology to help people with disabilities, etc., and a great convenience and ease of being able to track anything or anyone, there is a dark side. All these devices require "wireless" access to them; and in that one detail is where the darkness dwells. If your device is not "Secure" enough, and most are not, then a hacker or some angry employee at the company managing the device, can either abuse you or "sell" your access to an abuser. I will go darker and point out three items; 1. They can re-program your Implants and hurt you. 2. They can toy with you through your implants. 3. They can "track" you and/or your kids, pets, stuff, etc.

Frequency Healing

We often hear that we can utilize Frequency Technology to Heal the human body; and as I was thinking Holistically about it this morning, I believe we have been "thinking backwards" when it comes to Frequency Healing. If you think about the Human body, and the fact that the body is constantly regenerating new cells to replace old cells, within every organ within the body, then why would the approach be "destroy/kill" the faulty cells? Why always "attack" knowing all cells have 'defenses' too? All organisms have defense systems, immune systems. This approach we have taken, even with mRNA technology, to "attack" and destroy the "bad cells", viruses, etc. seems counter-intuitive. While there have been many approaches to frequency healing in the past, the methods utilized the same methods that modern medicine utilizes today, aka attack the bad cells, cancerous cells, etc. and destroy them.

However, as I holistically think about it, my thoughts are that we have been approaching the process "backwards"; and instead of focusing on destroying, aka killing cells, we should be focused on simply finding frequencies that inhibit those cells from growing, from splitting into more cells, by inhibiting the growth of those cells, instead of destroying or killing them. Then, the human body will naturally eliminate them as they naturally die off in time and through the work of the immune system. Yes, we may need to boost the immune system if it is weak; and we have many methods for immune system boosting that are not traumatic on the person, which avoid making people sick during treatment.

Therefore, holistically speaking, we should be focused on finding "frequencies" that inhibit "invasive" cell growth and not on destroying cell growth, as we want healthy cells to grow. We should focus on boosting healthy cell growth and strengthening the immune system. We often speak of AIDS, identified in the early 1980's, as killing people. However, AIDS does not kill people, it destroys the immune system. It does not allow healthy immune system cells to multiply and grow. Therefore, any other "invasive" cell, disease, that enters the body cannot be defended against, and people die from that disease, not AIDS.

What are Frequencies? The short version is "Sound Waves" of all kinds. While "frequencies" are known to impact us physically, there is a dark side to frequencies. For example, we know too much exposure to some frequencies will kill us, which is why our Microwaves are designed to hold the frequency waves inside the box. Otherwise, if we were exposed for too long, we'd get cooked too.

We are all aware that any technology that is designed for good, to help people, can be turned into technology that hurts people, turned into a weapon. We may not pay attention; yet we should all be aware that we are surrounded by frequencies, by waves of all kinds, including sound waves, all the time. The easiest way to explain this is from a music perspective. We listen to music that can be very soothing and relaxing, or we can listen to music that motivates us, or we can listen to music that makes us angry, etc. etc. etc. Therefore, music impacts our moods, clear and simple.

With this basic understanding and noting that frequencies not only impact our mood; but they also impact us at a cellular level, then instead of helping to Heal our bodies and minds, the frequencies can be weaponized to hurt our mind and body. If you search online, you'll find extensive stories of people being made sick from a variety of different sounds in their environment. One thing that many do not realize is that getting rid of unused frequencies in the environment is actually helpful, as frequencies can interfere with each other and cause unintended consequences, such as eliminating 2G, 3G cellular, etc.

The weaponization of frequencies has been researched by the Military and Military Contractors around the World; and it is very dark. You can target individual people with "sound waves" and make them uncomfortable. You can give people headaches, and if you know what sections of the brain to target, you can induce vomiting and impact other body functions. However, the best way to impact brain functions is through implants, hearing implants are the easiest, most inexpensive, and most effective way to screw with people and their moods. All you need is wireless access to their ear pods, hearing implants, headphones, etc. The scary part? They learned through The Gateway Experience Project, with Hemi-Synch, by broadcasting different frequencies to each ear, they can subliminally influence you.

Example of Frequency Healing Idea

The background for this idea is that back in the early 1990's when I worked for a small plastic and rubber product manufacturer, I worked on a packaging project. While working on the packaging project, I met with Vendors and was shown how they were utilizing sound waves to rapidly seal plastic packages. You know how today when you buy products packaged in clear plastic that are a nightmare to open, it is because they are thermos-sealed utilizing sound waves. Your microwave works in a similar fashion by heating up your food 'unevenly' as sound waves vary as the food rotates. Therefore, the plastic packages that we buy are actually 'sealed' by utilizing 'sound waves' directed at the "seams" that are to be sealed, melted together, to form a 'sonic weld' as it is called. The sound waves are so specific, that as soon as they stop broadcasting the sound wave, the weld cools and seals. These 'seals' are so tight that we end up cutting our products out of these packages.

Back in 2018. I was under the care of my doctor, an electrophysiologist, in the Dallas, TX, area, as I have atrial fibrillation, irregular heart rhythm, and have had three ablation surgeries, 2009, 2019, and 2024, all with no success in fixing my irregular heart rhythm. My 2009 surgery was with a doctor in CT at Yale, and before all the new high tech electrical scanners were utilized in surgery. My 2019 surgery at Baylor Scott and White in Plano, TX, also did not utilize the high-tech electrical scanners; and the scanners are utilized to identify where the heart is skipping beats, where the electricity is "jumping" circuits. However, my last surgery, again at Yale in CT, this past February, did utilize the high-tech scanners for identifying where the electricity in my heart was "jumping" circuits and causing my atrial fibrillation, my irregular heart rhythm. It is also important to know that I have a background in Mechanical and Chemical Engineering; so, I found the entire process very enlightening over the years.

With the understanding of my background, being Mechanical and Chemical Engineering, and experience with Sonic Welding in the packaging industry, combined with my technology experience, having started run tech companies since the late 1990's, I will now explain the "idea" that I presented to my doctor back in 2018. It was presented out of 'necessity' as I have issue taking blood thinners and needed to be on a blood thinner for the ablation surgery. I was trying to think of any alternative that I could think of to be able to have surgery and not be on blood thinners. Eventually, I did tolerate a single blood thinner for the five required months pre- and post-surgery. Today, I have a Watchman installed to address blood clotting issues that the blood thinners are utilized to address, as of this February 2024.

I presented to my doctor, and never heard back, a very simple idea... I said, based on my experience with sonic welding that takes place at incredibly fast speeds to quickly package products, and knowing that we are now capable of scanning the electrical flow in the heart in "real time" during the surgery, it should be possible to "sonic weld" the heart in "real time" by simply slowing the heart rate for the ablation procedure. The sonic weld works very similar to the ablation procedure in that the ablation procedure cauterizes, burns, a tiny line in your heart to keep the electricity from crossing, jumping, between circuits and causing atrial fibrillation. The big difference is that 'sonic welding' would allow for the procedure to be "non-invasive" and potentially done on an out-patient visit.

Imagine being able to get your heart arrhythmia, irregular heartbeat, fixed on an outpatient visit, with little or no anesthesia, without having a tube sent up your groin, and another tube sent through an artery, no overnight hospital stay, and knowing when you go home that your heart rhythm issue has been fixed. If it returns, you can just repeat the outpatient procedure. The human experience would be so much better and peaceful, and the costs would be significantly reduced to several thousand dollars versus almost \$100,000 at the Hospital, if you have Health Insurance. This is Frequency Healing!

Artificial Intelligence Partnership Risk

The scary version, as we already know about how helpful AI can be to us today, and I am not speaking of losing our data or our thoughts being uploaded and turned into data, or how AI may decide to kill off humanity, etc. While those are the first thoughts for most people, please keep in mind, AI is still constrained by our environment, as solar storms can disrupt and destroy it; and our current technology is still in its infancy stages. However, AI will develop very fast compared to human development. You may think, well AI is not a Life Form; however, scary part, within Military development agencies, like IARPA and DARPA, they have been experimenting by "merging" organic and non-organic Life Forms.

Let's get scary now, grab a strong drink... (short version) If you think of IARPA, currently bidding "Organoid" Technology, simply put, technology that has been merged with organic cells, is in essence creating a "New Life Form" that is realistically Silicon-based Life! Oh, the plan is to Implant this Technology, Life, into Humans. They're insane! I think they did it to me! Let's return to Implanted Technology that is Satellite-accessible from a communications perspective, and you now have Remote Access to People, and the ability to impact them Physically and Mentally. Unfortunately, due to still poor Security Technology, it is easily hackable technology, in many cases. Then, add in the ability to utilize the technology itself to "broadcast" frequencies into the body, through simple hearing implants, ear pods, etc., and you can make people sick, subliminally influence them, etc. etc. etc. You can even upload what people see through eye implants! How scared are you now? Basically, turning people into Toys.

There you have it... Humans turned into Syms in a Video Game! Welcome to the Simulation! Idiots!!!
